

NUCLEI's Achievements

NUCLEI has built and practically tested the vision of a new model of transnational collaborative environment in the area of advanced manufacturing, mechatronics, robotics, technology transfer, and innovation in the Central European area. This model is based on sustainable links between regions and countries, and between industry, research and local authorities in charge of regional development, and it uses several tools to help collaboration and its meaningful output.

During the project the partners involved Central Europe companies in:

The website reports promotion posts and highlights on **Technology Transfer Stories** performed during the NUCLEI pilot actions duration.

Through the project closed in June 2019, the consortium members plan to keep this successful collaboration applying NUCLEI methodologies and hopefully even to expand it through cooperation with other technological platforms active in Europe and thus fortify the linkages and global competitiveness of European industry.
